LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,

BUREAU OF EDUCATION,

Washington, November 17, 1914.

Sir: As State appropriations for education increase, the feeling of need for a better organization and a more effective supervision of the schools of the States grows, and with it grows also the interest in the organization and functions of State boards of education and the selection and duties of the chief school officers of the States and the equipment of their offices. Many requests come to this office for information on these subjects. To assist in answering these as fully as possible, I recommend the publication of the accompanying manuscript, Organization of State departments of education, as a bulletin of the Bureau of Education. This manuscript has been prepared at my request by A. C. Monahan, specialist in rural school administration in this bureau, on the basis of studies made by Wickliffe Rose while he was serving as general agent of the Peabody Education Fund, and a compilation of laws made by William R. Hood of this bureau.

Respectfully submitted.

P. P. CLAXTON, Commissioner.

The Secretary of the Interior.

ORGANIZATION OF STATE DEPARTMENTS OF EDUCATION.1

STATE BOARDS OF EDUCATION.

The trend of educational development is toward the State board of education as the administrative head of the educational system. In 37 of the 48 States in the United States there are State boards of education with functions relative to the public schools; in one other, Minnesota, there is a State board with functions relative to the public high schools only. In the other 10 States, namely, Alabama, Illinois, Iowa, Maine, Nebraska, New Hampshire, Ohio, South Dakota, Wisconsin, and Wyoming, there are no such boards. Two of these 10, Nebraska and Iowa, have State boards known as boards of education. The Nebraska board has charge of the State normal schools and has no other functions; the Iowa board has charge of the State institutions of higher education, including normal schools, but has no functions concerning other schools. The State boards in Arkansas, Pennsylvania, and Vermont have been created by laws enacted within the last four years. During the same period the boards in Arizona, California, Delaware, Georgia, Idaho. Indiana, New Jersey, North Dakota, Oklahoma, and Washington have been reorganized in the interest of greater efficiency as a result of State legislation.

Composition of the State boards of education.—The composition of the boards in the various States is shown in the accompanying table. The ex officio members and the appointed or elected members are shown separately. The present trend in educational development is toward a board composed of persons who have some knowledge of the business which they are to administer. This does not mean necessarily persons actually engaged in educational work; it means that the tendency is away from the ex officio boards composed of State officers without special educational qualifications.

It will be noted that, of the 37 States with State boards of education, 8 still hold to boards made up of ex officio members, officers at the State capitol. These are Colorado, Florida, Kentucky, Mississippi, Missouri, North Carolina, Oregon, and Texas. These ex officio boards are usually composed of the governor, the superintendent of public instruction, and one or more other State officers, such as the secretary of state, attorney general, treasurer, auditor,

[&]quot;In the preparation of the descriptive part of this bulletin free use was made of a manuscript written in 1913 by Wickliffe Rose, director of the Rockefeller Foundation International Health Commission, to accompany the tabular exhibits (revised up to date) relative to the State boards of education and chief State school officers contained in the report of the Illinois Educational Commission published in 1909.

lieutenant governor, or comptroller of the treasury. In Colorado and Kentucky the governor is not included; in Texas the State superintendent is not included. Nevada has an ex officio board that includes the president of the State university. In 10 other States the board is composed of ex officio members at the State capitol and members appointed at discretion by the governor. In 5 States the boards are appointed by the governor and include no ex officio members; these are California, Delaware, Massachusetts, New Jersey, and Vermont. The New York board contains no ex officio members, but is elected by the legislature. In 17 States the governor is a member of the board.

It will be noted that in 7 States the president of the State university is ex officio a member of the board of education. In 5 States the president of the agricultural and mechanical college is also a member, and in 4 the normal schools are represented on the board ex officio by one or more members. Indiana designates the superintendents of the three largest cities of the State as ex officio members.

Appointment of the State board of education.—The drift is toward appointment by the governor, with restrictions to guard against arbitrary use or abuse of the appointing power. Of the 28 States with State boards containing appointive members, 22 leave the appointment with the governor, subject in some cases to approval by the State senate; 4 States leave the matter with the State legislature; 1 State puts it to popular vote; and in 1 State it is left to the State superintendent.

The appointed or elected members are composed both of men in educational work and men not in educational work. In 4 States only men engaged in educational work may be appointed; in 7 States a certain number of men not engaged in educational work must be appointed; in 12 States the laws do not specify, but leave the matter with the appointing body. The tendency seems to be in these States to appoint both educational men and others. These appointments may be made with the view of getting men adapted to the position, or the appointments may be controlled by political interests. The pressure of public sentiment is growing steadily in favor of appointment on the basis of fitness for the service.

Appointment by the governor, under proper restrictions, has a threefold merit:

- (a) It recognizes the executive head of the State as responsible to the people for the efficiency of every department of the public service. It tends to make the board responsible to the public.
- (b) It centers responsibility where it can be definitely located. When the general assembly elects it is difficult to locate responsibility.

(c) Requiring that appointments be made from an eligible list, or in some other way throwing proper definite limitations around the appointing power, provides against abuse and protects the board from undue political interference. It is doubtful if it is ever advisable to make the governor a member of the board.

Size of the board, term of office, and mode of retiring.—The tendency seems to be toward a board composed of from 6 to 11 members, holding office from 6 to 8 years, and retiring in small groups. The boards vary in number from 3 to 13; 6 States have as few as 3, and 1 has 13. These smallest numbers are all made up of ex officio members and may be regarded as representing the passing type. In 14 of the 37 States the boards range from 8 to 12 members. This group includes a striking number of strong boards, as in Arizona, Louisiana, Maryland, Massachusetts, New York, Tennessee, and Virginia. A board of this size is not too large for working efficiency and is sufficiently large to create continuity of service, provided it is organized to retire in small groups.

In case of all the ex officio boards the term of office is fixed and is usually 2 to 4 years. In such boards members usually retire of necessity in a body. In 16 of the 37 States appointments are from 4 to 6 years, inclusive, with members retiring in small groups; in 2 States the term is for 7 years, in 1 State 8 years, and in 1 State 12 years.

In several States the number of members of the board and the number of years in the term are the same. In West Virginia, Pennsylvania, Arkansas, and New York there are, respectively, 5, 6, 7, and 12 members, 1 retiring each year; in Maryland and Tennessee there are 6 members who retire in groups of 2 every second year.

The board with a reasonably large membership (8 to 11), with appointment for long term of service and so organized that its members will retire in small groups, has two strong points in its favor:

- (a) It guarantees that degree of continuity in service without which no business can be successfully administered.
- (b) It can not be changed to satisfy the caprice of any individual or to meet the political needs of any one State administration. The educational service is thus protected against undue political influence without being relieved of responsibility to the public which it serves.

Duties and powers of the State boards of education.—The preference seems to be for a State board made responsible for the efficiency of the whole State system of education and clothed with full administrative power. In extent of duties and powers these boards as now constituted vary all the way from near zero to complete control

of the State educational interests. The Michigan State board, outside of its duties in control of the State normal schools, has little power except in granting teachers' certificates; the New York State board has supervision of all educational agencies in the State. Between these two extremes the other State boards have all degrees of responsibility and power. In 14 States, for instance, the boards not only have functions concerning the elementary and secondary schools, but are trustees of the State normal schools. These are Connecticut, Idaho, Indiana, Maryland, Massachusetts, Michigan, Montana, Nevada, New Jersey, New York, Oklahoma, Rhode Island, Tennessee, and Vermont. In 4 States the boards are trustees of the State universities. These are Florida, Idaho, Montana. and Oklahoma.¹

This diversity in the present status of boards is confusing enough, but the tendency in recent legislation is overwhelmingly toward centering in the State board larger responsibility and powers. Idaho, for instance, which until 1912 gave the State board power only to grant and revoke certificates, now gives to it general control of all educational work in the State, even succeeding the powers and duties of the trustees of the State institutions of higher education. The Georgia Legislature has recently enacted a law reorganizing the State board of education and giving to it greatly enlarged powers. The reorganization of the Virginia State board has given it almost full administrative power.

This movement toward centralization has come to its most complete expression in the New York board. Of the powers of this board the Illinois educational commission, in its report issued in 1911, says:

The board of regents of the University of New York is composed of 12 members, who are elected by the legislature to serve for a period of 12 years. No officers of any of the incorporated educational institutions of the State are eligible to membership. There are no ex officio members, but the commissioner of education acts as its executive officer. The University of the State of New York is a corporation created in 1784. It includes all the incorporated higher educational institutions of the State. The State library and the State museum are departments of the university, and the board may establish other departments if they are deemed necessary to the discharge of its duties. It has power to exclude from membership any institution failing to comply with the law of the State or the rules of the board. It has charge of private academies and in some measure of the public secondary schools, as well as of all the higher institutions. All the powers and duties of the board in relation to the supervision of elementary and secondary schools, including all schools except colleges, technical and professional schools, are devolved upon the commissioner of education, who is elected by the board. The board of New York has power to establish such rules and regulations as are necessary to carry into effect the statutes of the State relating to education. It cooperates with other agencies in bringing within the reach of the

¹ The principal function of the Montana board is control of the State university, the State agricultural and mechanical college, and the State normal school. See p. 18.

people of the State, young and old, the largest educational opportunities by stimulating interest, recommending methods, designating suitable teachers and lecturers, and by lending books and apparatus. It establishes in the academies of the university examinations in studies, furnishes a suitable standard for graduation from academies and of admission to colleges, and grants certificates and diplomas to those who pass such examinations. It controls the whole matter of granting honorary degrees and diplomas. The board has power to incorporate any university, college, academy, library, museum, or other institution for the promotion of science, literature, art, history, or other departments of knowledge.

Commenting on this tendency to centralize responsibility and power in the State board of education, President Butler, of Columbia University, says:

There can be no doubt about the general tendency being strongly toward greater centralization. Not only are its advantages quite apparent, but the overwhelming current of legislation and of the decisions of the courts is making it imperative. These are practically in accord, and are to the effect that in each State the school system is not local, but general; not individual schools controlled by separate communities, but a closely related system of schools which has become a State system and is entirely under State authority. Local school officials are now uniformly held to be agents of the State for the administration of a State system of education.¹

It has been urged that the New York State board is going too far in exercising supervision over private institutions. But it should be definitely understood that in a very important sense there is no such thing as a private educational institution; an educational institution is by the nature of its function essentially public and should be responsive to the needs of the public which it serves. Every educational agency in the State is a part of the State's educational system and should be under the general administrative supervision of the State board of education.

Summary of tendencies.—In the gradual development of a more and more effective agency for administering the State's educational affairs the trend is toward a State board of education as the administrative head of the educational system; a board composed of men who have some knowledge of the business which they are to administer; a board appointed by the governor of the State with restrictions to guarantee fitness for the service and to guard against arbitrary use or abuse of the appointing power; a board composed of from 8 to 11 members, appointed for a term of from 6 to 11 years, and retiring in small groups—this to guarantee that degree of continuity in service and freedom from political interference that are necessary for effective service; a board made responsible for all the educational interests of the State and clothed with full power to administer the business.

education. Some of the serious disadvantages of his election by popular vote are reasonably clear:

- (a) This method of appointment limits the field from which it selects the man for the position; he must be a citizen of the given In States where the superintendent is appointed by the State board of education, and in some States where he is appointed by the governor, he may be selected from the country at large. The city board of education selects its superintendent of schools from the country at large. Trustees of colleges and universities, even of State universities, select executive heads of these institutions from the country at large. Boards of directors in control of large business interests select their executive officers from the country at large. In Germany many towns and cities, when there is a vacancy in the office of mayor, advertise the fact throughout the Empire and invite applications for the position; and a similar method of selecting the city manager is being adopted in cities in the United States with the commission form of government. Such freedom of selection is clearly in the interest of better service.
- (b) Where the State superintendent is elected by popular vote the salary is fixed beforehand by law; the salary can not be adjusted to fit the man desired, but a man must be found to fit the salary. It is clearly in the interest of better service that city school boards, trustees of colleges and universities, and boards of business directors have authority to adjust the salary of executive officers to the needs and effectiveness of the service.
- (c) Where the State superintendent is selected by popular vote the term of office is short, two to four years, and reappointment is uncertain. The superintendent can not count on winning reappointment by rendering good service. Lack of continuity in the service, lack of basis for making and working out far-reaching plans, is a serious handicap to the superintendent, however capable.
- (d) This method of appointment makes the office a political one and subjects it to all the fluctuations of party and factional politics. Under these conditions the position is not attractive; no one can look to it as a career.

These serious objections to the selection of the State superintendent by popular vote hold true in part at least when the appointment is left to the governor. In a few States the governor is authorized to select the State superintendent from within or without the State. In five States, as previously mentioned, the State superintendent is appointed by the State board and is the executive officer of the board, performing such duties as directed by it. If the State board is to be made responsible for the State's educational business, it would seem that it ought to have the selection of its own executive officer; it should be free to select him from the country at large; it should have power to determine his compensation, and should keep him at his post as long as he is effective.

Relation of the State superintendent to the State board.—The trend both in practice and opinion is strongly in favor of the State superintendent as chief executive officer of the board. In those States which have no State board of education the superintendent is sole executive, and in many of the States which have State boards the position of State superintendent was created first, and the board has been made advisory; in many States where the relation of superintendent to the board has not been clearly defined by law, practice has made the State superintendent chief executive. In West Virginia the superintendent appoints the board; in New York he is appointed by the board, he is its chief executive officer, and in addition has many powers and duties not altogether subject to the approval of the board. This is indicated by the powers and duties conferred upon him by State law contained in the following pages.

Summary.—The trend in our present development is toward a strong working State board organized on a nonpartisan basis; the best interests of the service would seem to require that this board when thus constituted be given the power to appoint the State superintendent; that it be free to select him from the country at large, that it have authority to pay whatever salary is necessary to get the best man for the position; that it make the man appointed a member of the board and its chief executive officer; that it keep him in the service as long as he proves to be effective, and supply him a staff of assistants needed to do the work.¹ With the State department of education organized on this basis, the position of State superintendent stands first in responsibility and in the opportunity to render effective service.
